Grain Definition Document

1. Grain Statements

fact_match_team

Grain Statement: "One row represents the match performance of one team in a single Premier League match."*Note:* Since every match involves 2 teams (Home and Away), each match generates exactly 2 rows in this transaction fact table.

fact_team_matchweek_snapshot

Grain Statement: "One row represents the cumulative standing and aggregated season metrics of one team at the conclusion of a specific matchweek in a season."

fact_team_season

Grain Statement: "One row represents the presence and participation of one team in a single Premier League season."

2. Surrogate & Business Key Policy

- **Primary Keys:** Auto-incrementing integer Surrogate Keys on all tables (*_sk).
- **Natural/Business Keys:** Retained from source systems (team_name, referee_name, season_code).
- **SCD Policy:** Type 1 (overwrite) for dimensions by default; Type 2 capability structured for dim_team stadium updates if required.
